

DNA Expert

Martine joined Abiolabs Ltd in January 2019, to contribute to the company's growth and service diversification, by setting up a new DNA department.

Martine counts over 20 years of experience in DNA analysis. She started her career at the Haematology Laboratory of Bordeaux University in 1994. In 1996, she was appointed Molecular Biology Department Manager at the Forensic Haematology Laboratory of Bordeaux, where she helped resolve several criminal justice cases.

Martine's vast experience in DNA and genetics analysis development enabled her to come up with a precise identification method. As a result of her work, Abiolabs can propose diagnostic and predisposition DNA tests and help people to discover more about themselves.

DNA and Sports

Friday 3rd September
Conference Room #1
5:00pm to 5:45pm

Athlete's main objectives are to figure out their full potential and how they can be better at their sport. An easy way to obtain answers is to perform a DNA test. How much can a DNA cheek swab really tell a person?

Your genes are not going to tell you the future, such as if you will be an elite athlete or not. They can, however, indicate your physical aptitudes through your genetic profile.

A person's genetics are responsible for about 40% of what they do and the other 60% is based on their diet, lifestyle, environmental factors, and training. That can be a game-changer knowing exactly how to use a person's DNA to help them reach their goals. A genetic test for sports performance will tell a person how to use their DNA to their advantage to hit their goals.
